

To:            Commissioner's Court

From:        Bill Burke

Date:        11-5-14

Subject:     Secondary Fire Suppression for Data Centers

Charlie Kearns with Wiginton Hooker Jeffry Architects will be discussing the use of, and answering questions about, secondary fire suppression systems for data centers like DuPont FM 200. Charlie is a Registered Communications Distribution Designer and led the team that designed our current Courthouse server room.

At the end of the presentation we will need to decide the following:

1. Do we want to add a secondary fire suppression system to the existing courthouse server room as requested by I.T. during budget workshops?
2. Do we want to add a secondary fire suppression system to the I.T. Disaster Recovery Center at the Plano 920 Building?

Thank you for your consideration
